Prepared by B. K. Holst (MO); reviewed by F. T. Grifo (World Wildlife Fund, U.S.), M. L. Kawasaki (F) and L. R. Landrum (ASU). The total number of Myrtaceae species for Peru will certainly exceed 200 when the large number of unidentified collections can be thoroughly studied. The names listed in synonymy with a question mark are tentatively placed by the author.

Ref. FP 13(3A/2) 1956: 429; Meijer, 1978: 81.
Tree. Amazonian: forests, seasonally inundated areas. 0-500 m.
Note: Meijer (in herbarium) wavers between recognizing this as a distinct species and lumping it with *M. lepidota*, and it is impossible to tell from annotations where he currently stands. Meijer (1978) treated *M. williamsii* as an "insufficiently known species." Certainly that is no longer the case, as there are now many specimens from the Iquitos region. Since there are clearly at least two distinct species presently included in this complex, and as the Peruvian material all represents just one of these, I opt to continue using the name *M. williamsii*, which refers unambiguously to the entity occurring in Peru.

Not *Epidendrum grandiflorum* Humboldt & Bonpland, nor Lindley 1841, nor Poiret. Type: *Tessmann 4301* (B). *Bletia ensiformis* R. & P., Syst. Veg. Fl. Peruv. Chil. 1: 230. 1798. Type: *Pavón s.n.* (M!). Not *Encyclia ensiformis* (Vell. Conc.) Hoehne, 1952. -- An examination of the type of *Bletia ensiformis* (*Pavón s.n.*, holotype, M) clearly demonstrates that Schweinfurth (1953) was correct when he stated that his *Epidendrum cyperifolium* was perhaps the same as *Bletia ensiformis* Ruiz & Pavón; at that time, he only had seen a photograph of Ruiz & Pavón's material. The binomial *Encyclia ensiformis* is preoccupied, thus Schweinfurth's name takes precedence. The herbarium name *Encyclia ensiformis* (R. & P.) Mansfeld was never validly published.

Encyclia pilosa (C. Schweinfurth) Carnevali & I. Ramírez, comb. nov.
Based on: *Epidendrum pilosum* C. Schweinfurth, Amer. Orchid Soc. Bull. 11: 360, t. 10. 1943. Type: *Klug 779* (holotype, AMES!).

Based on: *Neokoehleria rauhii* Sanghas, Orchidee (Hamburg) 19: 125, figs. 1968. Type: *Rauh 21098* (HEID!).

Elymus hitchcockii Davidse, nom. nov.
Replaced name: *Elymus breviaristatus* (A. Hitchcock) A. Löve, Feddes Repert. 95: 471. Oct. 1984. Not Keng ex P. C. Keng, Bull. Bot. Res., Harbin 4: 191. Jul. 1984. *Agropyron breviaristatus* A. Hitchcock, Contr. U.S. Natl. Herb. 24: 353. 1927. *Elytrigia breviaristata* (A. Hitchcock) Covas ex J. H. Hunziker & Xifreda, Darwiniana 27: 562. 1986. Type: *A. S. Hitchcock 22462* (holotype, US). -- Löve's (1984) combination in *Elymus* appears to be a later homonym by several months, thus necessitating a new name when this species is accepted in the genus.

Sorghum bicolor (L.) Moench
While providing a sound classification of *Sorghum* sect. *Sorghum*, de Wet (1978) and de Wet *et al.* (1976) failed to provide a full and direct reference to the basionyms of their new subspecies or to their authors or place of valid publication. This technicality is corrected here.

Sorghum bicolor (L.) Moench subsp. **arundinaceum** (Desvaux) de Wet & Harlan ex Davidse, comb. et stat. nov.

Urochloa eminii (Mez) Davidse, comb. nov.
Based on: *Panicum eminii* Mez, Bot. Jahrb. Syst. 34: 135. 1904. Type: *Stuhlmann 4663* (lectotype, B; isolectotype, K). -- Mueller, Mueller & Gutte (1981) reported this African species for the first time as an adventive in South America. Morrone and Zuloaga (1992) did not treat this species in their revision of native and introduced species of *Urochloa*. The necessary combination is made here following their generic concept and Clayton and Renvoize's (1982) species concept.
